Abdullah Javed

Full-Stack Engineer | DevOps & Cloud Engineer

Faisalabad, Pakistan | +92-330-7189989 | abdullahjavaid1@live.com | linkedin.com/in/abdullah-javed-37a26a250 | github.com/realAbdullah450

PROFESSIONAL SUMMARY

Full-Stack and DevOps Engineer with 4+ years of hands-on experience developing web and mobile applications, SaaS platforms, backend services, and cloud-based solutions. Skilled in frontend and backend development using React, React Native, and Node.js, API integrations, database-driven applications, cloud infrastructure, and CI/CD automation. Experienced across the software development lifecycle, from application development and system implementation to testing, deployment, and infrastructure management.

SKILLS

Programming Languages: JavaScript, TypeScript, Python, SQL

Frontend and Mobile: React, Next.js, React Native, HTML5, CSS3, Tailwind CSS, Material UI, Bootstrap

Backend and APIs: Node.js, Express.js, NestJS, Deno, REST APIs, GraphQL, FastAPI, Flask

AI and Automation: AI-powered workflows, LLM integrations, Natural-language processing, AI classification engines, Workflow automation, Tool-based integrations

Databases and ORM: PostgreSQL, MongoDB, MySQL, SQL Server, DynamoDB, Redis, Prisma

Amazon Web Services (AWS): EC2, ECS, EKS, Lambda, S3, SQS, SNS, EventBridge, CloudWatch, X-Ray

Google Cloud Platform (GCP): Cloud Run, Cloud SQL, Cloud Storage, IAM

DevOps and Infrastructure: Docker, Kubernetes, Terraform, GitHub Actions, GitLab CI/CD, Jenkins, Infrastructure as Code (IaC), CI/CD pipelines, Workload Identity Federation

Distributed Processing and Integration: Celery, RabbitMQ, Apache Kafka, asynchronous processing, message queues, background workers, event-driven architecture, third-party API integrations

Testing and Quality: Jest, Cypress, Playwright, API testing, end-to-end testing, security scanning (SonarQube, Snyk, Gitleaks), CI quality gates

PROFESSIONAL EXPERIENCE

Full-Stack & DevOps Engineer | Ateitis Corp (Contract)

Remote | July 2025 - Present

Business consultancy specialized in information security strategies.

Enterprise Management Workflows

- Designed relational database schemas for enterprise management workflows.
- Developed backend services supporting core enterprise management workflows.
- Implemented identity and access management controls to support secure user access.
- Designed and maintained cloud infrastructure and automated deployment pipelines, supported by automated unit and end-to-end testing.

DevSecOps and CI/CD

- Implemented an end-to-end DevSecOps pipeline supporting engineering delivery workflows.
- Integrated Jenkins and GitLab CI/CD with commit-triggered execution, automated ticket creation, and multi-stage delivery workflows.
- Implemented automated security scanning and CI/CD quality gates.
- Automated Docker-based development deployments and established a controlled QA-to-production handoff with pipeline traceability.

Procurement Data Collection Platform

- Developed a distributed procurement intelligence platform collecting tender information from multiple government procurement sources.
- Implemented scalable distributed processing workflows for automated tender collection.
- Built automated data collection and extraction workflows for tender information.
- Implemented data storage, job tracking, and recovery workflows to support resumable processing.

Full-Stack Developer | Telehunt (Contract)

Remote | July 2025 - Present

Hunting For The Best Of Overseas Talent.

AI-Powered Business Workflow Platform

- Built an AI-powered, multi-channel agent enabling users to execute business workflows through natural-language interactions.
- Developed integrations with CRM, productivity, and third-party business services.
- Implemented automated workflow orchestration with intelligent trigger matching and permission-based action controls.
- Applied security and privacy controls to help protect integration credentials and tenant data.

Real-Time Collaboration Platform

- Implemented a real-time presence system tracking employee availability states, with broadcast updates to connected clients.
- Developed room-based access controls and state synchronization for virtual office spaces and collaborative interactions.
- Integrated chat, video communication, and Kanban task management to support remote team collaboration and workflow tracking.

Team Productivity Platform

- Architected a multi-tenant platform with organization-level data isolation.
- Developed structured daily briefing workflows with submission tracking, completion verification, and progress monitoring.
- Built centralized dashboards enabling team leads to monitor briefing submissions and team accountability.

Frontend Engineer | Sofrix (Full-Time)
Faisalabad, Pakistan | September 2024 - July 2025
IT Services and IT Consulting - The smarter the software, the stronger the business.

- Developed frontend features for web and mobile application projects using React and React Native, including the Sloan Leaders application and other client applications.
- Integrated frontend components with backend APIs and collaborated with engineering teammates on implementation, debugging, application functionality, user experience, and delivery.

React Native Developer | Nutrifactor (Full-Time)
Faisalabad, Pakistan | October 2023 - September 2024
Manufacturer of dietary supplements, vitamins, minerals, and natural healthcare products for over 10 years.

- Developed a React Native mobile commerce application using TypeScript, integrating with Shopify's headless commerce backend through GraphQL APIs.
- Implemented optimistic UI updates, rollback mechanisms, cache invalidation, and session persistence to maintain consistent shopping state across user sessions.
- Built product discovery, search, cart, and checkout workflows, alongside behavior-driven recommendations to personalize the shopping experience.

MERN Stack Developer | Ghanisoft (Full-Time)
Faisalabad, Pakistan | June 2023 - October 2023
Leading full stack development company specializing in e-commerce applications.

- Developed dashboard features for a tax rebate and refund management platform, supporting application tracking, document management, tax calculations, and approval workflows.
- Developed restaurant e-commerce applications with centralized dashboard management for products, menus, deals, and website content, enabling customers to browse offerings, place orders, and complete checkout.
- Built administrative interfaces using React, Material UI, and Tailwind CSS, implementing user management and role-based access functionality.

Full-Stack Developer | Independent Freelance Developer (Upwork and Fiverr)
Remote | July 2022 - Present

Handyman Marketplace System (SaaS)

- Built a multi-actor state transition engine for service marketplace with state-driven workflow and rule-based matching.
- Integrated real-time communication via Socket.io with event-driven updates scoped to job/offer context.

News Chunk (Intelligent Content System)

- Developed AI-powered content aggregation system with multi-source web scraping and intelligent classification.
- Built layered processing architecture with REST APIs and React-based unified timeline interface.

Taylor CAD Property Automation

- Built browser-based property data extraction system using Playwright for dynamic portal navigation.
- Implemented checkpoint system for state persistence and recovery during long-running extraction processes.

EDUCATION

Bachelor of Science in Electrical and Electronics Engineering, National University of Computer and Emerging Sciences (FAST-NUCES), 2009 - 2013

CERTIFICATIONS & PROFESSIONAL TRAINING

Front End Development (HTML, CSS, JavaScript & React) — Corvit Systems, Faisalabad
