PROFESSIONAL SUMMARY

Full-stack systems and DevOps engineer with 5 years of hands-on experience designing, building, deploying, and scaling production-grade systems. Strongest positioning is end-to-end systems ownership across backend architecture, distributed processing, cloud infrastructure, DevOps automation, workflow systems, and production operations. Engineering approach is load-driven and operationally grounded, with focus areas including backend engineering, cloud infrastructure, distributed systems, platform engineering, workflow automation, system design, and observable production operations.

CORE TECHNICAL SKILLS

Backend Engineering: Node.js, Express, NestJS, Python, FastAPI, Flask, REST, GraphQL, authentication flows, multi-tenant systems, workflow engines, backend automation

Cloud Infrastructure: AWS EC2, ECS, EKS, Lambda, RDS, DynamoDB, SQS, SNS, EventBridge, VPC, IAM, Secrets Manager, CloudWatch, SSM, CloudFormation, Terraform, ECS Fargate

DevOps & Platform Engineering: GitHub Actions, Jenkins, GitLab CI/CD, Docker, Kubernetes, Infrastructure as Code, zero-downtime deployment patterns, rollback support, reproducible environments, security scanning

Databases & Storage: PostgreSQL, MongoDB, DynamoDB, Redis

Distributed Systems: queue-based workers, asynchronous processing, Playwright worker fleets, Redis pub/sub, BullMQ, Celery, Kafka, RabbitMQ, AWS SQS, AWS SNS, EventBridge, retry logic, dead-letter handling, horizontal scaling

Frontend Technologies: React, Next.js, TypeScript, React Native, WebSockets, Shopify GraphQL

Observability & Monitoring: Prometheus, Grafana, OpenTelemetry, Loki, CloudWatch, AWS X-Ray, structured logging, custom metrics

Automation & Data Processing: Playwright, ETL pipelines, browser automation, queue-driven extraction, validation, transformation, deduplication, worker fleets, workflow state machines

FLAGSHIP ENGINEERING PROJECTS

Tender Procurement Intelligence Platform

Business Domain: Procurement intelligence and government tender data extraction Priority: Flagship
Built a queue-based distributed worker system using Playwright automation and ETL pipelines to extract and process tender data from 50+ government portals.

- **Engineering Impact:** Automated procurement data extraction across 50+ government portals.; Designed a distributed scraping system with 20 parallel workers.; Completed full extraction and processing cycles in about 5 minutes per batch, down from hours of manual effort.; Supported validation, transformation, deduplication, and checkpoint recovery patterns.
- **Technical Stack:** Playwright, ETL pipelines, Redis, queues, worker fleets, MongoDB, PostgreSQL

Event-Driven Processing Platform on AWS

Business Domain: Cloud processing platform and asynchronous backend operations Priority: Flagship
Built a production-grade AWS event-driven processing platform using CloudFormation, ECS Fargate, SNS/SQS, MongoDB, Redis pub/sub, and full observability.

- **Engineering Impact:** Built event-driven processing using AWS CloudFormation, ECS Fargate, SNS/SQS, MongoDB, Redis pub/sub, and distributed tracing.; Improved failure isolation, monitoring, traceability, and recoverability.; Supported retry logic, dead-letter queues, circuit breakers, stateless architecture patterns, and queue-based processing.
- **Technical Stack:** AWS CloudFormation, ECS Fargate, SNS/SQS, EventBridge, MongoDB, Redis pub/sub, OpenTelemetry, AWS X-Ray, Prometheus, Loki, CloudWatch

DevOps CI/CD Pipeline System

Business Domain: Software delivery automation and release operations Priority: Flagship
Built an automated delivery pipeline covering build, test, security scanning, Docker containerization, deployment, monitoring, and rollback.

- **Engineering Impact:** Automated build, test, security scanning, containerization, and deployment workflows.; Reduced full environment provisioning to a single-command deployment using Infrastructure as Code.; Improved release repeatability through reproducible environments, rollback support, and zero-downtime deployment patterns.
- **Technical Stack:** GitHub Actions, Jenkins, GitLab CI/CD, Docker, Kubernetes, Terraform, CloudFormation, security scanning, observability tooling

Tax Rebate Processing & Refund Management Platform

Business Domain: Tax rebate processing, financial workflow, refund management Priority: Flagship
Built a state-controlled financial workflow platform for customer onboarding, identity verification, document processing, tax calculation, staff review, refund approval, and reconciliation.

- **Engineering Impact:** Replaced manual tax rebate tracking and fragmented approval operations.; Centralized onboarding, identity verification, document processing, review, approval, refund management, and reconciliation.; Created a more reliable and auditable refund workflow execution model.
- **Technical Stack:** Node.js, Python, REST, GraphQL, Redis, PostgreSQL, MongoDB, role-based access control, workflow state machines

Handyman Marketplace System

Business Domain: Service marketplace Priority: High

Built a full-stack marketplace platform with frontend workflows, backend services, authentication, payment integration, real-time workflows, and scalable infrastructure.

- **Engineering Impact:** Enabled marketplace workflows between service participants.; Centralized authentication, payment, and workflow operations.; Supported a scalable marketplace business model.
- **Technical Stack:** React, Next.js, TypeScript, React Native, Node.js, Express, NestJS, REST, GraphQL, WebSockets

Virtual Office - Real-Time Workspace

Business Domain: Collaboration and real-time workspace operations Priority: High

Built a presence-based collaboration workspace with dynamic user states and WebSocket-based real-time interactions.

- **Engineering Impact:** Supported real-time collaboration and user presence in a virtual workspace.; Made user availability and workspace interaction visible in real time.; Improved coordination for distributed workspace activity.
- **Technical Stack:** WebSockets, React, Next.js, TypeScript, React Native, Redis pub/sub

Nutrifactor Mobile Commerce Platform

Business Domain: Mobile commerce and headless ecommerce Priority: Medium

Built a React Native mobile commerce app using headless Shopify and Shopify GraphQL for product, inventory, and order workflows.

- **Engineering Impact:** Delivered a mobile commerce experience over a headless Shopify backend.; Synchronized inventory and orders between mobile app and commerce backend.; Enabled mobile shopping and commerce operations.
- **Technical Stack:** React Native, Shopify GraphQL, GraphQL API integration

Briefly - Multi-Tenant SaaS

Business Domain: SaaS workflow and structured reporting Priority: Medium

Built a multi-workspace SaaS platform with role-based access, structured reporting, and real-time workflow automation.

- **Engineering Impact:** Supported structured reporting and workflow automation across workspaces.; Centralized role-based workflow and reporting.; Improved team workflow visibility and accountability.
- **Technical Stack:** React, Next.js, TypeScript, Node.js, Express, NestJS, REST, GraphQL, WebSockets, role-based access control

CopyFlow - Workflow Management System

Business Domain: Document workflow management Priority: Medium

Built a role-based document lifecycle system with strict state transitions and permission control.

- **Engineering Impact:** Controlled role-based document workflow operations.; Reduced ambiguity in document lifecycle and permissions.; Created more structured and auditable

workflow management.

- **Technical Stack:** Node.js, Python, REST, GraphQL, Redis, PostgreSQL, MongoDB, RBAC, workflow state machines

ENGINEERING ACHIEVEMENTS

- Designed a distributed scraping system with 20 parallel workers completing full extraction and processing cycles in about 5 minutes per batch, down from hours of manual effort.
- Automated procurement data extraction across 50+ government portals using queue-based Playwright workers and ETL pipelines.
- Reduced full environment provisioning to a single-command deployment using Infrastructure as Code with Terraform and CloudFormation.
- Built stateless architectures enabling seamless horizontal scaling with zero downtime.
- Implemented comprehensive observability using Prometheus, Grafana, OpenTelemetry, CloudWatch, AWS X-Ray, and Loki.
- Reduced mean time to detection on production issues through comprehensive monitoring and observability.
- Built event-driven processing using AWS CloudFormation, ECS Fargate, SNS/SQS, MongoDB, Redis pub/sub, and distributed tracing.
- Built controlled workflow systems for tax rebate processing, refund management, document lifecycle control, and multi-tenant SaaS workflow automation.

EDUCATION

BS-EE (Electronics)

National University of Computer and Emerging Sciences (NUCES LHR) | 2013

ADDITIONAL TECHNOLOGIES

AWS EC2, EKS, Lambda, RDS, DynamoDB, VPC, IAM, Secrets Manager, SSM, EventBridge, Kubernetes, BullMQ, Celery, Kafka, RabbitMQ, WebSockets, Shopify GraphQL, structured logging, custom metrics
