Professional Summary

Full-Stack Software Engineer with 4 years of hands-on experience designing, building, deploying, and scaling production-grade systems. Specializes in backend systems, cloud infrastructure, DevOps automation, distributed systems, and modern web applications. Delivers complete solutions across frontend, backend, distributed processing, cloud infrastructure, and DevOps automation — turning ideas into reliable, observable, and highly operable platforms.

Technical Skills

Languages: JavaScript, TypeScript, Python

Backend: Node.js, Express, NestJS, FastAPI, Flask

Frontend: React, Next.js, React Native, TypeScript

Cloud: AWS EC2, AWS ECS, AWS EKS, AWS Lambda, AWS RDS, AWS SQS, AWS SNS, AWS EventBridge, AWS VPC, AWS IAM, AWS Secrets Manager, AWS CloudWatch, AWS SSM

Containers: Docker, Kubernetes

CI/CD: GitHub Actions, Jenkins, GitLab CI/CD, Terraform, CloudFormation

Databases: PostgreSQL, MongoDB, DynamoDB, Redis

Messaging: SQS, SNS, EventBridge, Kafka, RabbitMQ, Celery, BullMQ

Distributed Systems: Distributed task processing, Asynchronous job execution, ETL pipelines

Monitoring: Prometheus, Grafana, OpenTelemetry, Loki, CloudWatch, AWS X-Ray

APIs: REST, GraphQL, WebSockets

Professional Experience

DevSecOps & Full-Stack Engineer

Ateitis Corp | 2025-07 – Present | Part-Time | Remote

Design and implement cloud-native backend infrastructure, CI/CD pipelines, automation systems, distributed backend services, and production deployment workflows.

- Design and implement cloud-native backend infrastructure on AWS
- Build and maintain CI/CD pipelines using Jenkins and GitLab CI/CD
- Develop Infrastructure as Code solutions using CloudFormation and Terraform
- Configure containerized deployments using Docker and AWS ECS
- Build event-driven backend services using AWS SNS, SQS, and EventBridge
- Implement observability using CloudWatch, OpenTelemetry, Prometheus, Grafana, and Loki
- Automate software delivery, deployment, monitoring, and operational workflows
- Improve security, deployment reliability, and production automation

Primary Technologies: Node.js, Python, AWS, Docker, ECS, CloudFormation, Terraform, Jenkins, GitLab CI/CD, MongoDB, Redis, OpenTelemetry, Prometheus, Grafana, Loki

Associated Flagship Projects: Tender Procurement Intelligence Platform, Event-Driven Processing Platform on AWS, DevSecOps CI/CD Pipeline System

Frontend Engineer

Sofrix | 2024-09 – 2025-07 | Full-Time | Faisalabad, Pakistan

Develop modern React and React Native applications for multiple client projects, focusing on user experience, reusable components, API integration, and scalable frontend architecture.

- Develop React and React Native applications
- Build reusable UI components and application layouts
- Integrate REST APIs and backend services
- Implement authentication and role-based workflows
- Manage application state and frontend architecture
- Optimize application performance and responsiveness
- Collaborate with backend developers and designers

Primary Technologies: React, React Native, TypeScript, JavaScript, REST APIs

React Native Developer

Nutrifactor | 2023-10 – 2024-10 | Full-Time | Faisalabad, Pakistan

Develop a React Native mobile commerce application integrated with a headless Shopify backend.

- Develop mobile application features using React Native
- Integrate Shopify GraphQL APIs
- Build product catalog and order management workflows
- Synchronize inventory and order information
- Improve application performance and usability
- Collaborate with backend and product teams

Primary Technologies: React Native, TypeScript, Shopify GraphQL

Associated Flagship Projects: Nutrifactor Mobile Commerce Platform

MERN Stack Developer

Ghanisoft | 2023-06 – 2023-10 | Full-Time | Faisalabad, Pakistan

Work on full-stack web applications across e-commerce, restaurant management, and financial workflow systems using the MERN stack.

- Develop backend APIs using Node.js and Express
- Build React-based frontend applications
- Design MongoDB data models
- Implement authentication and authorization
- Integrate third-party services and cloud storage
- Develop workflow-based business applications

Primary Technologies: Node.js, Express, React, MongoDB, AWS S3

Associated Flagship Projects: Tax Rebate Processing & Refund Management Platform

Freelance Full-Stack MERN Developer

Upwork & Fiverr | 2022-07 – Present | Freelance | Faisalabad, Pakistan

Deliver freelance MERN stack projects for international clients, building responsive web applications and REST APIs while managing complete project lifecycles from requirements to deployment.

- Build full-stack MERN applications
- Develop REST APIs using Node.js and Express
- Build React user interfaces
- Design MongoDB database schemas
- Deploy client applications
- Maintain client communication and project delivery

Primary Technologies: MongoDB, Express.js, React, Node.js, JavaScript

Associated Flagship Projects: News Chunk

Engineering Projects

Tender Procurement Intelligence Platform

Procurement intelligence and government tender data extraction

Distributed data extraction system processing 50+ government portals using queue-based Playwright workers and ETL pipelines. Delivered automated ~5-minute cycles with 20 parallel workers.

- Designed distributed scraping system with 20 parallel workers completing extraction and processing cycles in ~5 minutes per batch
- Built queue-based Playwright workers and ETL pipelines for transformation and processing
- Implemented validation, deduplication, and checkpoint recovery patterns

Technical Stack: Playwright, Redis, BullMQ, ETL pipelines, AWS SQS, AWS SNS, AWS EventBridge, AWS ECS Fargate

Event-Driven Processing Platform on AWS

Cloud processing platform and asynchronous backend operations

Production-grade event-driven processing system using AWS CloudFormation, ECS Fargate, SNS/SQS, MongoDB, and Redis pub/sub with full observability (OpenTelemetry, X-Ray, Prometheus, Loki).

- Built production-grade event-driven processing system using AWS CloudFormation, ECS Fargate, SNS/SQS
- Implemented Redis pub/sub for real-time communication
- Designed comprehensive observability with OpenTelemetry, X-Ray, Prometheus, and Loki
- Configured retry logic, dead-letter queues, circuit breakers, and failure isolation

Technical Stack: AWS CloudFormation, AWS ECS Fargate, AWS SNS, AWS SQS, MongoDB, Redis, OpenTelemetry, AWS X-Ray, Prometheus, Loki

Tax Rebate Processing & Refund Management Platform

Tax rebate processing, financial workflow, refund management

Workflow-driven tax rebate lifecycle platform replacing manual forms, spreadsheet tracking, and fragmented approval processes. Built a state-controlled financial workflow engine for customer onboarding, identity verification, document processing, configurable tax calculations, staff review, refund approval, and refund reconciliation.

- Built state-controlled financial workflow engine for customer onboarding, identity verification, document processing, tax calculations, staff review, refund approval, and reconciliation
- Replaced manual forms, spreadsheet tracking, and fragmented approval processes
- Implemented strict state transitions and permission control

Technical Stack: Node.js, Express, React, MongoDB, Role-based access control, Workflow state machines

DevOps CI/CD Pipeline System

Software delivery automation and release operations

Automated build, test, security scanning, containerization (Docker), and deployment pipeline with full observability and rollback.

- Automated build, test, security scanning, Docker containerization, and deployment pipeline
- Implemented Infrastructure as Code using Terraform and CloudFormation
- Configured rollback support and zero-downtime deployment patterns
- Built full observability with monitoring and rollback capabilities

Technical Stack: Jenkins, GitLab CI/CD, Docker, Terraform, CloudFormation, OpenTelemetry, Prometheus

News Chunk

Content aggregation and intelligent news classification

Intelligent content consolidation system with web scraping, AI-based classification, and unified timeline interface for structured news consumption across multiple sources.

- Built intelligent content consolidation system with web scraping and AI-based classification
- Designed unified timeline interface for structured news consumption across multiple sources
- Implemented multi-source data aggregation and transformation pipelines

Technical Stack: React, Python, Flask, REST APIs, AI classification, Web scraping

Nutrifactor Mobile Commerce Platform

Mobile commerce and headless ecommerce

Headless Shopify integration using React Native and ShopifyGraphQL with real-time inventory and order synchronization.

- Developed React Native mobile commerce application integrated with headless Shopify backend
- Implemented Shopify GraphQL APIs for commerce data integration
- Built real-time inventory and order synchronization

Technical Stack: React Native, TypeScript, Shopify GraphQL

Key Engineering Achievements

- Designed distributed scraping system with 20 parallel workers completing full extraction + processing cycles in ~5 minutes per batch (down from hours of manual effort)
- Reduced full environment provisioning to single-command deployment using Infrastructure-as-Code (Terraform/CloudFormation)
- Built stateless architectures enabling seamless horizontal scaling with zero downtime
- Implemented comprehensive observability (Prometheus, Grafana, OpenTelemetry, CloudWatch) that reduced mean time to detection on production issues

Education

Bachelor of Science in Electrical Engineering, National University of Computer and Emerging Sciences (NUCES) (2013)

Lahore, Pakistan

Focus: Object-Oriented Programming, Data Structures, Database Systems

Certifications

- DevOps on AWS (Coursera)
- The Complete 2023 Web Development Bootcamp (Udemy)
- Problem Solving (Basic) (HackerRank)
